

A functional cover for use with a wireless terminal.**A B S T R A C T.**

A wireless communication terminal has a user exchangeable covers part. The
5 wireless communication terminal and user exchangeable cover part are
electrically interconnected by means of an electrical connector. The user
exchangeable cover part comprises identification means. The user
exchangeable cover part has an electric circuitry for supporting a user
interface of the wireless terminal. The wireless terminal identifies the user
10 exchangeable cover part by detecting the identification means. The wireless
terminal operates the electric circuitry of the user exchangeable cover part in
dependence of the identification of user exchangeable cover part.
